

So... you think there's been nothing new in seismic interpretation lately?

Think again.

Insight Earth 1.6 from TerraSpark Geosciences delivers better, more reliable tools that no one else can provide. With Insight Earth 1.6, interpretation workflows are greatly accelerated, while improving quality and accuracy. All within a fully 3D seismic interpretation platform.

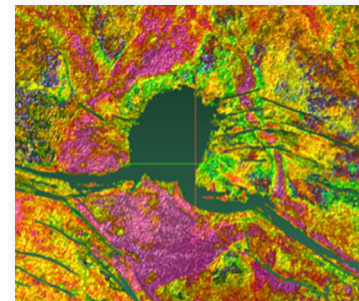

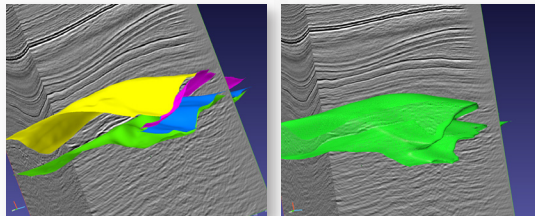

New interactive import and export GUI

Automated Fault Enhancement™ improvements

Complex salt bodies create a multi-z mesh

Four attributes co-rendered with lighting control

Insight Earth 1.6 incorporates the most science-driven innovative thinking in the field of 3D interpretation. New features and capabilities include:

- Data conditioning – footprint removal and voxel processing
- Upgraded snapping and autotracking
- Successful microseismic workflow for enhanced fracture detection
- Multi-dimensional glyphs and property calculator for mapping and interpreting
- Co-rendering of multivariate attributes
- Efficient, automated 3D paint, mesh generation (Surface Wrapping™), mesh editing, salt mask generation and velocity model creation via simplified, easily iterative volume math
- The most accurate, efficient, best-imaged Automated Fault Extraction™ toolkit in the industry
